

Hypothesis Testing Summary

Objective

- To determine whether there is a significant difference in the average Total Sales between male and female customers.

Business Question

- Is there a significant difference in the average Total Sales between male and female customers?

Null Hypothesis (H_0)

- There is no significant difference in the average Total Sales between male and female customers.

Alternative Hypothesis (H_1)

- There is a significant difference in the average Total Sales between male and female customers.

Statistical Test Used

- Independent Sample t-test.

Result

- Decision: **Fail to Reject the Null Hypothesis.**

Conclusion

- Based on the statistical test, there is **no statistically significant difference** in Total Sales between male and female customers.
